

The number of permutations of  $n$  different objects taken  $r$  at a time is:  $P_r = \frac{n!}{(n-r)!}$

**Example 1:** Matt has downloaded 10 new songs from an online music store. How many different 6-song play lists can be created from 10 songs?

$${}_{10}P_6 = \frac{10!}{4!} = 151200$$

Math  $\rightarrow$   $P_r$  2:  $nPr$

$${}_{10}nPr$$

**Example 2:** How many 8-song play lists could Matt in example 1 create?

$${}_{10}P_8 = 1,814,400$$

**Example 3:** State the values of  $n$  for which each expression is defined.

a)  $(n+3)!$   $n+3 > 0$   
 $n > -3$

(b)  $\frac{n!}{(n+2)!}$   $n > 0$   
 $n+2 > 0$   
 $n > -2$

**Example 4:** An online magazine requires each subscriber to have a password with exactly 8 characters. The password can use any digits from 0 to 9 and/or any letters of the alphabet. The password is case sensitive, so she can use both lower- and upper-case letters. How many different passwords are possible?

$${}_{62}P_8 = 1.36E14$$

$$1.36 \times 10^{14}$$

$$26 + 26 + 10$$

$$= 62$$

**Example 5:** How many different passwords are possible in example 4 if the password must be at least 4 characters but a maximum of 6 characters?

$$\begin{array}{ccc} \underline{4 \text{ charac}} & \underline{5 \text{ charac}} & \underline{6 \text{ charac}} \\ {}_{62}P_4 = 13388280 & {}_{62}P_5 = 776520240 & {}_{62}P_6 = 4.42 \times 10^{10} \end{array}$$

$$\text{Total} = 4.51 \times 10^{10}$$

**Example 6:** At a used car lot, seven different car models are to be parked close to the street for each viewing.

a) The three red cars must be parked so that there is a red car at each end and the third car is exactly in the middle. How many ways can the seven cars be parked?

$$\begin{array}{ccccccc} \frac{3}{R} & \frac{4}{ } & \frac{3}{ } & \frac{2}{R} & \frac{2}{ } & \frac{1}{ } & \frac{1}{R} & \frac{3!4!}{=} & 144 \end{array}$$

b) The three red cars must be parked side by side. How many ways can the seven cars be parked?

$$\boxed{\boxed{R} \boxed{R} \boxed{R}} \quad \frac{4}{ } \quad \frac{3}{ } \quad \frac{2}{ } \quad \frac{1}{ } \quad 5!3! = 720$$
